

## Windows activation tool

**Call here +1 (844) 886-3118** Most of the time <https://mssupport.tech/> Windows activators or crack tools have malware or viruses in them. How about be like the rest of the world and buy your copy of windows. Either that or go to a pawn shop or thrift store or something like that find an old windows 7 or 8 computer and write the registration code down off the case and use that to register your copy. Maybe you could even ask a friend if they have an old OEM machine that they haven't used the serial off of. My dad once told me that nothing in life is free. But, if you do find something that is it has class.

I upgraded Windows 8.1 to Windows 10 using the media creation tool without any change in activation or reactivation agony. If you get **+1 (844) 886-3118** stuck and are asked to activate again, enter your windows 8.1 activation key after you upgrade to Windows 10, and that should reactivate it. In another situation, I used the media creation tool to upgrade to Windows 10 from an activated Windows 7 Pro refurbished PC, checked the activation status afterwards (it was not activated), <https://msgroup.blog/> entered the Windows 7 activation key into the Windows 10, 25-digit spaces and the new Windows 10 activated beautifully.
